

I have worked from home for 10 years. I have gone through many technology changes during this time, from dial-up to DSL and now having to use satellite internet since Summerset Lake does not offer DSL.

I have to work 40 hrs/week and sometimes on the weekends due to my job responsibilities. At any given time any weather conditions other than sunny (rain, snow, sleet, clouds, etc.....) are present I am constantly getting poor internet service. For those of us who work from home this causes a LOSS of INCOME to our families!

I worked on DSL for 4 years before moving here and never had ANY problems, EVER! To be honest we were told by realtors that this area had DSL when we purchased our home, only to find out that because a FEW people in this "rural area" did not want DSL .....all of us that do and need DSL have to suffer. If we had known this prior to our home purchase we would not have chosen this area to raise our family.

Since this is available in our area we have to take advantage of this opportunity.

Thank you,  
A. Canada

\*We also have children that would love to "surf-the-net" for school info, homework help, down-loading songs, emailing family and friends not in this area, and just playing the normal games that kids like to play on the internet.....however without DSL this is impossible due to the slow internet service.....
